

Since 1968, Etermet has been designing, manufacturing and innovating metal shelving for picking solutions

Trenta5

Shelving for medium-light loads
Specialised and customisable solutions for picking and storage.

6Strong

Shelving for medium-heavy loads
Solutions for manual and automated picking.

BanKo

Professional sales bench
Sturdy, ergonomic and versatile.

SHELVING WITH BOXED PROFILE

MADE IN ITALY

MANUAL PICKING SHELVING

ETERMET shelving systems are versatile and configurable solutions for **picking and storage of medium-light loads**.

Thanks to the innovative **patented hook-in system**, they ensure fast and intuitive assembly. Components are designed to eliminate sharp edges, providing greater safety for operators and protection for stored goods.

The **wide range of available accessories** – including hanging systems, drawers and doors – together with the choice of **galvanized or painted finish**, makes them suitable for many sectors, including industry, pharmaceutical, clothing and archives.

MOBILE SHELVING

ETERMET mobile shelving systems, available with manual or electric operation, remove the fixed aisles constraint providing a **significant saving of floor space**.

The solidity of mobile bases, the reliability of drive system and the strength of shelving structure ensure **high performance and long service life**.

Ideal for **archiving** and **high-density storage** of light loads such as small parts, consumables, hanging garments and pharmaceuticals.

MULTI-LEVEL SHELVING

ETERMET multi-level shelving systems enable the creation of one or more walk-on levels, increasing storage capacity **without taking up additional floor space**.

The **walking surfaces** are available in various configurations (grating, solid steel or wooden panels), with staircases and access points designed in compliance with **safety regulations**.

Solutions can be complemented with **pallet gates, guardrails, protective panels and a wide range of accessories**, ensuring operational safety, functionality and customised configurations for every project.

TYRE RACKING

ETERMET tyre racking systems are designed for the safe and **organised storage of tyres**, ensuring efficient use of warehouse space.

The **Ø42 mm round beams** provide optimal tyre support and smooth handling during picking and storage operations.

Ideal for the design of **seismic-resistant systems**, even at great heights, they can be served by order pickers and configured as multi-level or mobile shelving.

ORDER PICKER SHELVING

ETERMET shelving systems for order pickers are designed to fully utilize warehouse height, **reducing aisle widths and maximising available space**.

The structure's high performance and the option of integrating floor guidance rails ensure **operational safety and workflow continuity**.

Ideal for storing **boxes, packages and loose goods**, they offer flexible configurations thanks to the use of shelves and beams, together with a wide range of accessories for efficient product organizations.

AUTOMATED WAREHOUSE SHELVING

ETERMET shelving systems are designed to integrate perfectly with automated storage systems for light loads, such as **Miniload and Carton Transfer Units**.

The high manufacturing quality of components ensures compliance with the **tight tolerances** required, guaranteeing operational reliability, high storage density and optimized processing times.

Ideal for **automated picking systems of cartons and plastic boxes**, they can be configured with single or double depths and equipped with shelves, panels and accessories for various picking requirements.
